

InnalTKey

SOFT TOKEN

**Secure Access.
Simplified.**

InnaIT Soft Token offers an innovative way for users to securely authenticate themselves using their smartphones.

A secure solution that combines native biometric authentication on smartphones and PKI to provide robust passwordless identity authentication & transaction authorisation while enhancing user experience and reducing costs

Why you should consider InnaITKey Soft Token

Strengthened Security Posture: InnaITKey Soft Token significantly enhances protection against impersonation and related cyberthreats through advanced encryption and biometric authentication

Ease of use: Using the native biometrics on the smartphone makes it easy for the user as it eliminates the need for an additional authentication device

Cost-Effectiveness: QR code and TOTP technologies help eliminate OTP based authentication and additional authentication devices, making the solution very cost-effective

Flexibility and Compatibility: InnaITKey Soft Token works seamlessly with any smartphone

Security Overview

- PKI used to ensure fail-safe Token identification
- Uses native biometrics of the smartphones
- Out-of-band secure channel
- Secure Android application
- Standards / protocols – TLS 1.3, OpenID connect
